07/01/12 00:00 CST 0 Drought

07/31/12 23:59 CST 0

A persistent upper level high pressure ridge over the central portions of the country caused more extreme heat and dry conditions for the area. Severe drought remained in place across portions southwestern Missouri as rain fell sparsely during the month. The month of July was one of the driest on record for many locations. Drought conditions ranged from severe across southwestern Missouri to extreme over south central Missouri. Numerous heat related illnesses were reported across southwestern Missouri. Heat illness reports for the region are compiled by the Greene County Health Department and are reported in the Greene County heat entry.

07/01/12 00:00 CST 0 Heat

07/31/12 23:59 CST 116 0

A strong ridge of high pressure settled over the central portions of the U.S. and became the dominant weather pattern for much of the Summer of 2012. Several record highs were broken around the area and high temperatures reached above 100 degrees 12 days. The overall mean temperatures for Springfield was 6.1 degrees above normal for the month of July. There were 29 days where the maximum temperatures reached 90 degrees or above. The hottest temperature record during the month was 106 degrees on July 29th. Heat advisories and warnings were issued for portions of the area by the end of June. Even though air temperatures were extreme, the humidity levels were relatively dry causing the heat index to be closer to the actual air temperatures.
